Bug with War 3

Hey there,

Windows Live wizard just closes after the step where you put your username and password. The only way to setup a hotmail account is to disable HTC Sence, reboot the phone (not sure on this one), run the wizard again.

I saw a few people write about this as well...

Thanks!

MightyMike War -3 bugs

Sprint PRL update doesn't work. I get HTC Device Error on startup. This is some permission issue that used to exist in SENSE UI 2.1 ROM and has been resolved since. Same fix needs to be applied for this ROM

War Bug

There is no way to disable the "new message" pop up whe you get a new text or SMS

bug for war

1. Not really a bug as this is found in all the new ROMS with landscape support. Flipping through emails in landscape is really slow...
2. CFC compressed would be excellent.

Other than that nothing...Thanks for doing this.

Not a bug per se, however when there is an unread message in your inbox, you have the notification bubble cut off.

I do miss having a few (especially mightyrom.com) items bookmarked for the browser tab like on his 12/27 sunse ui 2.1 ROM

Also, it seems like the documents tab is a lot more sensitive to swipe, on WAR_V2 I could full swipe each document like a email or message, now it cycles through almost all so fast.

Also, I have seen a lot of people complain on how Exchange setup asks for email address then defaults it to your username instead of truncated the @domain.com off of it.

Ok weird while trying to find bugs I know have a dim manilla however my taskbars are not dim or if I hit start menu no dim? (no clue what just happened there) I heard <ding> and all went dim? <soft reset fixed it>

General Lag - not sure what can be done there

HTC Messaging looks terrible, half the time I can still see a portion if the Manilla interface in the body.

Sometimes the youtube app volume does not work. I can usually get it going again with a soft reset or by clearing the ram.
